Simple example of labelling with pinlabel

Oleg Soloviev

August 25, 2017

Please note how the same font is used for the text and for the labels inside the diagram.

Try to comment/uncomment font selection in the preamble.

$$i^{(k)} = x^{(k)}\mathscr{P}(i/x^{(k)}) \tag{1}$$

Figure 1: Take $i^{(k)}$ as projection of i on the side of simplex formed by $x(k)$ to get $i^{(k)}$. $x^{(k+1)}$ is then defined from equation (1).

Please see the package documentation[1] for all advanced options.

---

[1]Type `texdoc pinlabel` in command line
